- ✓ maximum sash weight 320 kg
- ✓ maximum sash dimensions H 3000 mm / L 2500 mm
- ✓ lacquered in the RAL K7 colour palette or the colour of your choice after indicating its code

COR Vision GALANDAGE is a version of the COR Vision aluminium system designed to create full-width passageways in the opening. Depending on the option chosen, one, two or even three active sashes can fully retract into the wall leaving the opening unobstructed.

A distinguishing feature of the system is a reinforced inox rail that offers the possibility of using larger and heavier door sashes and provides a gentle glide, extending system life. It is essential for creating three-track options.

In COR Vision GALANDAGE, frames can make up less than 10% of the structure, and the top, side and bottom frames can be built in for the best visual and functional effect.
