**CS 77 is an aluminium system with a thermal break that combines design and high thermal comfort**, while offering an optimal level of safety. It is also available with an offset T-type door frame (without nose).

CS 77 windows can be selected in one of three thermal versions: standard, warm HI and the warmest – HI+. **The system allows the use of thermally and acoustically well insulated triple glazing packages.** In FIX windows it is possible to make glazing from the outside.

People expecting increased durability can choose profiles with a pre-anodized coating, which are more resistant than basic solutions.

\*The above value of Uw is given for a reference window with dimensions of 1230 x 1480 mm, in the best thermal variant.
