- support for up to 4 compatible devices
- battery powered
- CR2430 batteries

A keychain remote control that can be easily put in your pocket

The 1-way, 4-channel Keygo 4 io garage door remote control is a device designed with ergonomics in mind. Its large button allows you to open or close the gate without looking at the remote control or even taking it out of your pocket. It fits comfortably in your hand. Its shape also makes it resistant to mechanical damage, and the precision of workmanship makes it waterproof. Each command send is confirmed by LED signalling.
