

Secustik® Luxembourg

✓ Application: PVC, aluminium, wood

✓ Standard spindle length: 32–42 mm (adjustable)

The Hoppe Luxembourg aluminium window handle from the Secustik series is equipped with an 8-position gear, allowing the handle to turn by 45° as recommended for windows with micro ventilation. SECUSTIK® technology is a patented locking mechanism that prevents the window perimeter fitting from being displaced from the outside and thus opening the window.

The handle is available with a key for selected spindle lengths and colours.

Can be used as a centre handle (short spindle version).
