SELVE Home Server 2

✓ intuitive first setup

✓ automation of daily activities

✓ assigning tasks to situations

✓ the ability to manually control the system

✓ remote control of the status of connected devices

✓ the ability to receive alerts in the application or by email

SELVE Home Server 2 is a Smart Home system control panel created for everyday improvement of the quality of life of household members. After an intuitive first configuration, the device takes control of roller shutters, blinds, cameras and sensors cooperating with the Commeo system.

System actions can be taken based on defined scenarios, or the device can react to conditions existing at a given moment, for example, turning on the lighting when the level of sunlight drops. You can also control the connected elements manually from a dedicated application for iOS or Android.

The device can also respond to voice commands and is able to work with the Amazon Alexa voice assistant.
