

SK45

- ✓ type of shutter armor: aluminum filled with polyurethane foam or PVC
- ✓ inspection from the external side
- ✓ aluminum guides
- ✓ resistance to weather conditions
- ✓ minimum box width 400 mm

A system with a characteristic box cut at an angle of 45 degrees from the outside. The perfect solution for people who prefer sharp and geometric finishing details. The roller shutter is dedicated for installation both directly on the facade of the building and in a recess on the window thanks to the universal shape of the box.

The economical variant of the adaptive roller shutter SK45, SK45 Railing, offers the full functionality of the basic solution. Thanks to optimized production processes, it has been possible to reduce the product's price while providing a unique design. The new shutter lock makes it resemble the popular RAFF-i roller shutter box.
