Chambers

SlimLine 38 Cubic is a system of aluminium windows inspired by the style of steel windows. Their narrow profiles allow for the creation of large glazing, and the installation depth is sufficient to use two-chamber glazing packages. This translates into very good thermal insulation properties.

The geometric, minimalist form of the **SlimLine 38 Cubic** profiles allows them to be used in modern construction and in the renovation of older buildings.

\*The above value of Uw is given for a reference window with dimensions of 1230 x 1480 mm, in the best thermal variant.
